Summary

CSE IoT student with 8.8/10 CGPA and hands-on experience delivering 4+ technical projects across Full Stack Development, IoT, REST APIs, Firebase, automation, real-time dashboards, and AI/ML fundamentals.

Technical Skills

Languages: Java, Python, JavaScript, C, HTML, CSS
Web Development: React.js, Node.js, Express.js, REST APIs, Full Stack Development
Core Concepts: Data Structures and Algorithms, OOP, DBMS, Operating Systems, Computer Networks
AI and ML: Machine Learning, Data Analytics, Classification, Regression, Model Training
IoT and Tools: ESP32, Arduino, Sensors, Firebase, Git, GitHub, VS Code, Postman

Education

Cambridge Institute of Technology, Bengaluru <i>B.E. in Computer Science and Engineering IoT</i>	2023 – 2027
Ishan International Girls' School <i>PUC and Matriculation</i>	Current CGPA: 9.0/10 Completed Percentage: 80.4%

Experience

Samsung Innovation Campus <i>IoT Project Trainee</i>	Sept 2025 – Feb 2026 <i>Cambridge Institute of Technology</i>
- Completed 6-month industry-oriented training in software development, IoT systems, structured problem-solving, and project implementation. - Collaborated in a 4-member team to prototype a smart water monitoring solution using live usage tracking, threshold notifications, and automated pump control.	

Projects

AutoReach Automation – Python, REST APIs, CSV, Email Automation	June 2026
- Engineered a 5-step lead generation pipeline that converts 1 company domain into similar companies, decision-maker contacts, verified emails, and CSV-ready prospect records. - Consolidated 5 manual outreach tasks into 1 CLI workflow using company discovery, contact enrichment, email validation, duplicate filtering, and dry-run preview.	
HydroSense – ESP32, Node.js, React, WebSocket	2025
- Developed a real-time IoT water management system using ESP32, flow sensor, REST APIs, WebSocket, and React dashboard to monitor borewell usage. - Configured 4 usage categories, daily limits, 80% warning threshold, automated alerts, and relay-controlled shutdown to reduce overuse and support resource control.	
Smart Campus Management System – Full Stack Development, Database	2025
- Designed a full-stack campus platform with 3 core modules for student records, academic activities, and campus resource management. - Digitized manual record handling with role-based access, database-driven storage, and structured navigation for students and administrators.	
CrashGuard AI – React, Node.js, Firebase, Telegram API	2026
- Built an accident response platform with GPS capture, Firebase real-time alert storage, Telegram SOS messaging, dashboard tracking, and hospital workflow. - Integrated a 15-second safety countdown, safe-cancel option, Google Maps links, and 2-step notification flow to improve emergency response visibility.	

Certifications and Achievements

- Certifications:** Samsung Innovation Campus Trainee, Java Foundation, Machine Learning, and Software Engineering Job Simulation covering IoT development, OOP, data preprocessing, model training, debugging, documentation, and software workflow practices.
- Achievements:** Secured 3rd position in a college inter-department hackathon and earned a merit award for maintaining 9+ CGPA across 2 semesters.
